

An Artificial Intelligence Approach to Integrated Circuit Floor Planning (Lecture Notes in Engineering)

In 1984, while I was following his postgraduate course on VLSI design, my supervisor Dr. David Skellern, asked me if I was interested in investigating intelligent approaches to automatic IC floorplanning. He told me then: a circuit that works always looks nice, has a clever data and control flow. A fast way to look at students IC projects is by looking at their floorplans.. Later, I took a course on Knowledge Engineering (KE) and Artificial Intelligence (AI) with Professor John Gero, who encouraged me to investigate this area of design automation. The resources for such development were really poor at IS&E as KE was a relatively new field of research in Australia at that time. //Whatever the difficulties (a good programmer never blames his tools as David Skellern used to tell me), I undertook the investigation of Knowledge-Based approaches to IC floor planning as my PhD thesis subject with the help of my supervisor and John Gero and the encouragement of all researchers at IS&E , who provided an exciting environment for my research. This volume reports the results of my research during 1984, 1985, 1986, and 1987. The volume deals with IC floorplanning from four perspectives: floorplanning strategy, Knowledge Engineering in the IC domain, the development of knowledge-based floorplanning processes and new floorplanning algorithms for use in the overall strategy.
