

Inspired by the ASHRAE GreenGuide, this book is aimed at datacom facility owners and operators, as well as the consultants who advise them. It seeks to identify techniques to optimize the energy efficiency within existing datacom facilities. Many of the techniques discussed can be implemented through simple operational changes, upgrades, or modifications that require relatively low investment or little disruption to the existing operations of IT equipment. ASHRAE, founded in 1894, is an international organization of some 50,000 persons. ASHRAE fulfills its mission of advancing heating, ventilation, air conditioning, and refrigeration to serve humanity and promote a sustainable world through research, standards writing, publishing, and continuing education. The ASHRAE Handbooks are the design standard for control of built environments with volumes on Systems and Equipment, HVAC Applications, Refrigeration and Fundamentals. Each is updated every four years. In addition to publishing design guidance for engineers, architects, and facility managers, we also publish a series of texts for classroom use. Some of the areas we publish in include: -Energy Modeling and Auditing -High Performance Building Design -Psychrometrics -Indoor Air Quality and Environmental Quality -Data Center Energy Efficiency -Noise & Vibration Control -Humidity Control -HVAC for Healthcare Facilities
