

The Role of Utility Companies in Solar Energy

An executive conference sponsored jointly by the Institute of Gas Technology and Gorham International Inc. was convened in Washington, D.C. November 6-8, 1977 to examine the feasibility of utility companies taking strong initiatives in developing solar energy for domestic, commercial, and industrial applications. The objectives were to identify business potentials, developmental problems, and necessary or desirable revisions to current regulatory policies. Alternative business configurations, economic considerations and financing possibilities were discussed. Statements of the keynote speaker, the conference chairperson, the session leaders, and the panel discussions, transcribed from tape, edited, and approved by the speakers, are published in the present volume. The views expressed are those of the speakers.
