Nuclear Half Life: Calculations - YouTube Jan 12, 2017 Do protons live forever or do they decay with a half-life of around 16 billion trillion trillion years? Thats an eternity considering the universe is **List of radioactive isotopes by half-life - Wikipedia** The radioactive half-life for a given radioisotope is a measure of the tendency of the nucleus to decay or disintegrate and as such is based purely upon that **What is half-life? - Definition from** Half-life (symbol $t_{1/2}$) is the time required for a quantity to reduce to half its initial value. The term is commonly used in nuclear physics to describe how quickly unstable atoms undergo, or how long stable atoms survive, radioactive decay. **Half Life The Physics Hypertextbook** The half-life is the length of time required for half of any given amount of an element to decay into another element.
