

How to make LED light bulbs yourself

How to make your own LED light bulbs and save money and energy. You can make your own LED light bulb at home and save on the cost of retail LED lamps. LED lighting is still a bit expensive, but that should not stop you from using LEDs to save energy at home. This booklet is an original from The Do It Yourself World with full color images and detailed plans. Includes tips and tricks for making a better LED lamp yourself. The book is actually two books in one. The first section deals with LED facts in general. The second section (book one) deals with how to make a 120 Volt LED light bulb for your home. The third section (book two) deals with how to make a 12 Volt LED light bulb for your RV, camper or boat. The LED light bulbs in these two books show you how to make a more efficient light bulb by avoiding the use of resistors. Resistors resist electricity, wasting the extra energy as heat. In an off grid living environment, wasting energy is undesirable. By making your LED light bulb without resistors or power converters, you are using all of your valuable energy.
