

Improving Integrated Surface and Groundwater Resources Management in a Vulnerable and Changing World (International Association of Hydrological ... of ... of Proceedings and Reports Publication)

With the increasing difficulties of meeting human demands on water resource quantity and quality, new concepts in water management need to be explored, with a move away from centralised command and control approaches to more participatory multi-stakeholder approaches that have the potential to be flexible and responsive. This volume tackles: Water resources availability; Water for food; Water quality; Floods and droughts; Change assessment and management; Monitoring and optimisation; Integrating water resources management

The International Association of Hydrological Sciences is the worlds premier member-based organization promoting the study and practice of Hydrology. Our books are authored, edited and produced at the highest level of quality, with the most current and thorough research. Our publications and our work advance the science and the professional practice of Hydrology in a variety of Science and Engineering fields around the world. The areas that we publish in include:

- Ground water
- Surface water
- Snow and ice hydrology
- Drought and desertification
- Runoff modelling
- Watershed
- Remote sensing
- Water quality
- Water resources and management
- Ecohydrology/hydro-ecology
- Erosion and sediment
- Tracer hydrology
