

# Proceedings of the 10th International Conference on Shallow-Level Centers in Semiconductors

The 10th SLCS conference covered a broad range of the topics concerned with the fundamental properties of shallow levels in semiconductors and with impurity related issues of importance to semiconductor technology. such as: - Single and multiple donors and acceptors - Shallow excited states of deep-level impurities - Impurity related properties of mesoscopic and/or low-dimensional systems - Impurity-bound excitations - Defects interaction on the atomic scale - New methods in shallow-level states theory - New experimental techniques - Aspects relevant to applications.
