

This monograph—based on the authors course lectures on radiation chemistry of biopolymers—deals with the primary stages of radiation-chemical transformation of main biopolymers. Special attention is given to radiolysis of their aqueous solutions, formation and conversion mechanisms of macroradicals, synthesized in acts of solvent radical interaction with biopolymer molecules and in their natural complexes.

Hearts Touched with Fire: My 500 Favorite Inspirational Quotations, The 2007 Import and Export Market for Iron or Steel Doors, Windows, Door Thresholds, and Window Frames in Australia, Boundary Elements in Fluid Dynamics, MARKS GOSPEL: A Primary Description of Jesus, [Computer History] Microelectronics Using General Electric emitter-Coupled Logic Operators. [GE Application Note 90.80.],
