

Optoelectronics in Medicine: Proceedings of the 5th International Congress Laser 81

The use of lasers in medicine has opened up entirely new fields of therapy and diagnosis. However, progress in the technical application of lasers, which often results in the sudden eclipse of previous techniques, far outpaces that in medicine itself. Know-how can be acquired only through exacting investigations by researchers and clinicians, and close collaboration between them is necessary if we are to understand the tremendously complicated biosystem that is the human being. With the desirability of rapid exchange and discussion of ideas and findings in mind, the MUnchener Messe- und Ausstellungs-GmbH organizes biennially the congress LASER OPTOELECTRONICS, which has become a forum for leading experts in laser medicine.
