

Water Quality International 94 Part 6: Nutrient Removal

This volume, the sixth part of the selected proceedings of the 17th Biennial Conference of the IAWQ, contains 42 papers from the sessions on Nutrient Removal. Both biological and physicochemical methods are considered for dealing with the problems of nitrogen and phosphorus, separately and combined, in industrial and municipal wastewaters. The conference proved to be the worlds premier conference for those professionally interested in water pollution research and control and in water quality management. Over 1100 delegates were attracted to Budapest for a high-quality programme covering advanced research and strategic overviews, treatment processes and receiving water impacts, problems of industrial and municipal wastewater, and much more. Together with the remaining parts of the proceedings it constitutes valuable update on our understanding of the water environment and the technologies that impact upon it.
